

POWEROPTIMAL
THE FUTURE OF ENERGY

Putting the power back in your hands

*Experts in smart power demand and
billing management solutions*

PowerOptimal financing options

See the benefits that PowerGuard could have on your business's bottom line – but can't afford the capital spend, or don't have a capital budget? We understand the financial constraints businesses experience. Contact us to discuss financing options, such as buying the system on a hire purchase basis. Here's how it works:

In a nutshell:

After an assessment of your electricity use patterns, we do a cost-benefit analysis to determine whether the approximate savings you will get with our PowerGuard solution will be worthwhile from a return-on-investment perspective.

If you decide to go ahead, you can buy the system on a hire purchase basis – with the monthly installment guaranteed to be lower than the amount you will be saving on your electricity bill as a result of our technology.

The details:

How do we work out what your potential savings could be?

- We review historical bills and energy use data (from at least one year back):
 - for accuracy / errors
 - to use as a baseline
- We install a certified, calibrated smart meter (if you don't have one already) to get actual usage and demand readings

Using the above information we calculate your potential savings using the reduction in peak demand that can be achieved with our technology compared to the baseline (kVA), and using the current peak demand charges.

Complete transparency

Monitor and verify your savings by accessing all the data on a user-friendly online interface.

If you agree to go ahead, we will discuss and agree upon any variations in power use at your facility upfront using an approach such as the International Performance Measurement and Verification Protocol. Such variations in power use could include, for example, the installation of new energy-efficient equipment, or expansion of your existing operations.
